Beginning the Journey Toward Full Inclusion: Experiences of Preschoolers and Their Families

Carl J. Dunst, Ph.D.
Orelena Hawks Puckett Institute
Asheville and Morganton, North Carolina, USA

Presentation made at the 13th Biennial Conference of the International Association of Special Education,
Vancouver, British Columbia, Canada, July 8, 2013
Introduction

• A universal aspect of young children’s daily lives throughout the world is that participation in everyday activities are contexts for learning socially situated and culturally meaningful behavior

• Inclusion for infants, toddlers, and preschoolers with disabilities can be conceptualized as participation in everyday family and community activities with family members, relatives, and other children and adults

• Participation of young children with disabilities or delays in everyday activity is a form of early intervention for promoting and enhancing child learning and development and strengthening child confidence and competence
Purposes of the Session

• Describe the kinds of everyday activities that are sources of participatory opportunities for young children with disabilities

• Describe and illustrate similarities and differences in the patterns of participation in everyday activities among young children with and without disabilities

• Provide examples of children's' participation in everyday family and community activities

• Describe the approaches to intervention that have proven most successful for increasing child participation in everyday activities
Everyday Activity Settings, Participatory Opportunities, and Child Inclusion in Family and Community Activities

• My colleagues and I have conducted research and practice where activity setting theory has been used as a framework for understanding young children’s participation in everyday activities.

• The particular model we have used focused on identifying the child characteristics, the characteristics of other persons, and environmental characteristics that are associated with positive child participation in everyday activities.

• One goal of the research and practice has been the identification of the characteristics associated with optimal child benefits and the use of the characteristics to promote child participation.
Definitions of Everyday Activity Settings

• “Contexts in which collaborative interaction, intersubjectivity, assisted performance, and learning occur.” (Tharp & Gallimore, 1988)

• “Activity settings are made up of everyday experiences...that contain ordinary settings in which children’s social interaction and behavior occur.” (Farver, 1999)

• “Situation-specific experiences, opportunities or events that involve a child’s interaction with people, the physical environment, or both, and which provide contexts for a child to learn about his or her own behavior capabilities as well as the behavioral propensities of others.” (Dunst et al., 2002).

Everyday Activity Setting Projects

• Increasing Children’s Learning Opportunities Early Childhood Research Institute
• Building Community Resources Inclusion Project
• POSSIBILITIES Recreation and Leisure Project
• Project ABLE (Asset-Based Learning Experiences)
• Anyplace, Anywhere Child Learning Opportunities Project
• Project PAL (Parents Assisting Learning)
• Contextually Mediated Everyday Child Learning Project
• Power of the Ordinary Project

NOTE: The locations, natural learning environments, and learning opportunities are only a small sampling of the make-up of a child’s community life.
Examples of Child Participation in the Everyday Family and Community Activities
Case Studies of Young Children’s Participation and Learning in Everyday Family and Community Activities

- Families of children with or without disabilities were visited on 6 occasions over a 5 to 6 month period of time to identify either the family or community activities that “made up” each child’s life.

- The case studies were conducted with families in Alaska, California, Connecticut, Hawaii, New Mexico, New York, North Carolina, and Wisconsin. Children and families were selected as participants based on different background characteristics.

- Observations, interviews, artifactual evidence (e.g., photographs, physical objects) and other information were used to identify the children’s everyday activities.

- Parents or other primary caregivers were then asked to report for each activity whether the child learned or engaged in context-specific functional behavior in the settings.

National Survey of Everyday Family and Community Life

- **Purpose**: Determine the age-related changes in child participation in everyday family and community activities.

- **Participants**: 3283 parents and other caregivers in 48 United States, Puerto Rico, and Yap (Micronesia).

- **Survey**: Participants completed a survey including either 50 family activities or 50 community activities that were identified from an extensive review of the literature.

- **Method of Analysis**: Determined the average scores for the children in 12 6-month age ranges between birth and 72 months of age.

Examples of Child Participation and Inclusion in Everyday Family and Community Activities
Factors Associated with Positive Child Participation Inclusion in Everyday Family and Community Activities

**Child Factors**

- Strengths-based approach to promoting child participation in everyday activities
- Interest-based child participation in everyday activities

**Adult Factors**

- Parent and other adults strengths and interests as sources of participatory child learning opportunities
- Strengths-based attitude and perspective of children’s capabilities

**Activity Factors**

- Situationally interesting features of everyday activities encouraging child participation
Child Strengths and Interests

**Child Strengths**

- What is the child good at doing?
- What are the child’s special skills or talents?
- What abilities does the child demonstrate most often?
- What is the child most successful at doing?

**Child Interests**

- What does the child like or prefer to do?
- What most excites the child?
- What gets and maintains the child’s attention?
- What are the child’s favorite things to do?
Strengths-Based Child Participation in Everyday Activities

• A focus on child ability rather than disability has been found to be a more effective strategy for engaging children in everyday activities.

• Use of adults’ strengths as a factor promoting child participation in everyday activities increases the likelihood of successful child inclusion.

• Participation in everyday activities that builds on both child and adult strengths simultaneously bolsters the positive effects of inclusion.
Interest-Based Child Participation in Everyday Activities

• One child characteristic that has consistently emerged as a person factor influencing everyday learning as part of our research and practice is a child’s personal interests (preferences, choices, desires, likes, etc.).

• One activity setting characteristic that has consistently emerged as setting factor influencing children’s everyday learning is the situationally-interesting (engaging) features of everyday activity settings.

• Incorporating either personal or situational interests into everyday child learning has been found to be associated with optimal child benefits.
Strengths- and Interest-Based Everyday Child Learning

ACTIVITY SETTINGS

Competence

Exploration and Mastery
Lessons Learned From Activity Setting 
Research and Practice

- Infants, toddlers, and preschoolers with disabilities participate in everyday activities in ways similar to other children.

- Intentional efforts to promote children with disabilities participation in everyday activities necessitates a paradigm shift toward strengths-based and away from deficit-based approaches to intervention.

- Of particular note is the fact that strengths- and interest-based child participation in everyday activities shifts others perspectives of children with disabilities to see their abilities rather than disabilities.
